POWERED BY

OPTUS

Brand: Cel-Fi

Product Code: RPR-CF-00442

Call for Price: 07 3277 0237

Description

Cel-Fi GO2 Repeater has been tested, authorised and approved by Optus for use on the Optus Mobile Network

The Cel-Fi GO2 for Optus Smart Repeater is the ideal product to boost and distribute a 3G/4G mobile signal within a building. Supporting voice and mobile internet for multiple mobile devices, boosting your indoor mobile coverage has never been easier.

This pack is ideal where you have reception problems at a site and you want to increase mobile signal both indoors and outdoors using one Cel-Fi GO2 unit. The external antenna is affixed on the rooftop collecting the mobile signal from outside and transferring it to the Cel-Fi GO2. The indoor panel antenna boosts it internally (within the house) whilst the MARS Antenna is cabled to the outdoor area and boosts a targeted signal external to the building. This set up has been used successfully in cattle yard, farming and residential applications.

FEATURES
